- 3. Percentage Decrease in number of Public Houses
- 4. Pub Closures in Ireland
- 5. Pub Closures by County

FOREWORD

The Irish pub is central to the cultural, social and economic fabric of Irish life, a cornerstone of our hospitality sector and an iconic symbol of Irish culture abroad. Equally, Irish restaurants are valuable indigenous businesses which are enjoyed by communities around the country.

For the last number of years, these cultural institutions and societal centre points have been in decline, particularly across rural Ireland where their loss is felt most acutely.

Such business closures harm local economies and the social lives of rural, often aging communities already facing social isolation. The local pub is often the only place where people can come together for a drink and a chat or host community events. Local restaurants serve as unique venues where people can connect and enjoy social experiences. If this trend of closures continues, Ireland will face the loss of significant social, cultural and economic assets

Since 2005, over 2,000 pubs equating to approximately one-third of all such businesses have closed. The majority of these have been small, often family-run businesses. Further recent analysis found that in the last six-months of 2023, 283 food-led businesses such as restaurants, cafés and gastropubs closed, with 2024 to date seeing a further 212 of these businesses shuttered.

Ireland's drinks and hospitality businesses are currently operating in an environment where they are faced with significant and recurring cost challenges. The costs of doing business in the hospitality sector have skyrocketed in recent years, particularly on key line items such as energy and insurance costs. In tandem, the sector is faced with one of the most regressive excise tax environments for small and medium enterprises (SMEs) across Europe.

Hospitality businesses live on small margins where every euro matters and Ireland's excise tax policy, which is the second highest excise duty on drinks across the EU and UK, is an additional and punitive burden on these businesses. The impact of this adds significantly to an already very high-cost base.

Untapped potential

With the right supports in place, the hospitality sector has the potential to grow, enhancing its economic and social value to the country in the process. A survey we conducted among nearly 600 hospitality leaders in August 2024 found that almost one in four had seen their business costs increase by 20-30% in the last two years. An additional 15% found that their business costs had increased by over 40% in the last two years. However, the survey also found that with meaningful government support, including an excise tax rate cut, these business owners would respond positively. 23% would refurbish their business. 18% would hire more staff and 22% would

use it to meet other existing costs. An additional 13% of respondents said that if costs such as excise came down they would invest in new offerings or opportunities such as food or accommodation. These figures demonstrate the untapped potential of the industry.

The traditional Irish pub and restaurant is incredibly important to consumers as well. A recent survey conducted by Core Research among 1,000 Irish consumers found that almost 70% of Irish people visit our traditional pubs and restaurants to catch-up with friends and family, over half (58%) to celebrate family occasions, while one in four people go to the pub to watch sport.

An additional 54% of people said that the government should do more to support Irish pubs, with 50% of people saying they believe that the level of tax on alcohol should be reduced. This sentiment reflects an understanding of how intrinsic the sector is to our social and cultural fabric.

To support the sector, the government should reduce excise tax. Now is the time to push for a reset in government policy towards the drinks and hospitality sector. DIGI ask is that in Budget 2025, the government move to a sustainable excise tax policy by commencing the process of aligning Ireland's excise tax rates with other EU countries. This can be achieved by implementing a 15% excise tax reduction over the next two years, with a 7.5% decrease in 2025 followed by a 7.5% reduction in 2026. Such a measure would have an immediate impact by reducing the cost base for thousands of Irish businesses across the country.

In this report, you will read a short economic analysis of the continuing trend of decline in the Irish pub by Economist and Associate Professor Emeritus of Economics at DCU, Anthony Foley. This analysis is based on his comprehensive report The Decline in the Number of Public Houses 2005 to 2023 which is available.

We also provide detailed research on the decline in the number of pubs in each county in Ireland since 2005 and the notable regional differences in same.

Kathryn D'Arcy

Chair, Drinks Industry Group of Ireland (DIGI)
Communications and Corporate Affairs
Director, Irish Distillers - Ireland

ECONOMIC AND SOCIAL ANALYSIS

The last 18 years has seen a significant decline in the number of public houses in Ireland. In the period 2005 to 2023, the number of pubs has reduced by 23.8%, from 8,617 businesses in 2005 to 6,563 for the most recent period in 2023. This represents a closure of 2,054 pubs across the country, an average of 114 closures per year.

The continuing trend of pub closures is reflected in every county in Ireland, with rural areas most significantly impacted. Between 2005 and 2023, the five counties which suffered the largest percentage reduction in the number of pubs were Limerick (35.6%), Roscommon (31.9%), Cork (31.4%), Tipperary (31.2%) and Laois (30.6%). In total, seven counties had decreases of 30% or higher, and another thirteen counties had decreases of 20% or higher.

The trend of pub closures is persistent. VFI data shows that from 2019 to 2023, the average annual decline in pubs was 144, with the total number of pubs falling from 7,137 to 6,563, a drop of 574 or 8.0%. There was a notable contrast between the sector's performance in Dublin versus the rest of the country, with 25.9% of regional pubs closing in the last 18 years outside of Dublin compared to 2.8% in Dublin.

This analysis comes on top of recently published data by the Restaurants Association of Ireland which found that 283 food-led businesses such as restaurants, cafés and gastropubs closed in the last six months of 2023, with a further 212 such businesses shuttered so far this year.

Considering these concerning statistics, fostering commercial sustainability is crucial to safeguarding rural lrish pubs. Ireland's drinks and hospitality businesses are operating in an environment where they are faced with significant and recurring financial challenges. The costs of doing business in the hospitality sector have skyrocketed in recent years. Energy, insurance, wages and other cost line items continue to rise, many by double digits. The sector is also faced with one of the most regressive excise tax environments for small and medium enterprises (SMEs) in Europe.

As the figures demonstrate, these challenges have been particularly harmful to rural pubs. With limited local markets and smaller populations, pubs in small towns and villages often operate on narrow profit margins, leaving them especially vulnerable to closure. Strategic, meaningful government intervention can alleviate these vulnerabilities.

Each of the 2,054 pubs which have closed since 2005 would have, in their own way, been integral to the fabric of their communities, serving as cultural and social hubs and often providing the only place wherein the people of small communities could socialise. For these people, the closure of these pubs has meant the loss of significant social, cultural and economic assets for local communities.

Supporting the Irish pub is not just about economics, it's about cultural and social considerations too:

- Cultural Impact: Irish pubs have acted as an iconic symbol of Irish culture abroad, attracting thousands of tourists to the country each year. Ireland's valued tourism and hospitality sector has greatly benefited from the reputation that the traditional Irish pub has garnered across the world. Despite the challenges faced by the sector, the Irish pub has remained a cornerstone of Ireland's cultural fabric, providing hospitality, food, entertainment and music to visitors and local people alike. To continue to let this cultural institution decline would be to abandon one of Ireland's most valuable assets. The importance of pubs to our tourism offering is even more pronounced in rural counties such as Cork (-31.4% pub decline), Clare (-30.6% pub decline) and Donegal (-26.9% pub decline).
- Social Impact: Irish pubs make a significant social contribution to their local communities, where they act as a vital 'third space' for socialisation. They are a place where communities can gather to have a drink and a chat with their family, friends and neighbours and serve as a venue to host community events. They are especially valuable to rural Ireland, where people can face higher levels of social isolation. In many cases, the local pub is the only social outlet. The decline of the rural pub thus undermines community cohesion and social relationships.

When examining opportunities to mitigate the trend of pub closures in Ireland, it is necessary to consider the impact immediate economic measures can have in supporting the sector. One such measure is excise duty.

Despite various challenges such as the 2008 financial crisis and the Covid-19 pandemic, the Irish economy has grown substantially over the last 18 years. This economic growth, with all other things being equal, should have supported the alcohol and public house sectors. However, Ireland's regressive tax policy on alcohol has hindered the potential of the industry to grow and made business increasingly difficult for publicans.

The value that the Irish pub brings to the country's social, cultural and economic life is not reflected in policy or the level of recognition and support it receives from the government. Irish pubs are faced with the second highest tax rate on alcohol in the EU and UK. When compared to our European neighbours, this abnormally high rate of excise puts Irish consumers and business owners at a disadvantage. It increases the cost base for publicans. It also impacts consumers who are already grappling with higher every day costs in many aspects of their daily lives.

For example, Ireland has the third highest excise on beer in the EU. An Irish pint is levied with 11.4 times the tax that it is levied with in Germany. Ireland also has the third highest excise level on spirts, meaning that in Ireland, a 70cl bottle of Irish whiskey sold at an off-licence is levied with an additional excise duty of almost \le 12. In an Italian off-licence, that same bottle of Irish whiskey has an excise duty of just \le 2.90. Additionally, Ireland has the second highest excise on wine. For a French visitor to Ireland, an 187ml standard glass of wine which would attract an excise duty in France of just 1 cent, is levied with an additional 80 cents excise duty here, while 15 EU countries do not charge any excise tax on wine at all.

To help the many business owners who have been affected by this punitive tax policy, the Drinks Industry Group of Ireland (DIGI) is proposing a 15% reduction in excise duties across two years. This would involve a 7.5% annual reduction, bringing Irish alcohol excise levels in line with the EU average, easing the strain on indigenous business owners.

A reduction in the excise rate, as proposed by DIGI, would have the effect of immediately improving conditions for pubs in Ireland, especially in rural areas. Furthermore, given the vital role pubs play in the cultural and social fabric of Irish communities, the benefits of lowering excise rates are significant.

Anthony Foley
Economist and Associate Professor Emeritus,
Dublin City University

Methodology

This analysis is based on Professor Anthony Foley's comprehensive report 'The Decline in the Number of Public Houses 2005 to 2023' which is available to read on www.supportyourlocal.ie. Within this you will find full detail of the report methodology.

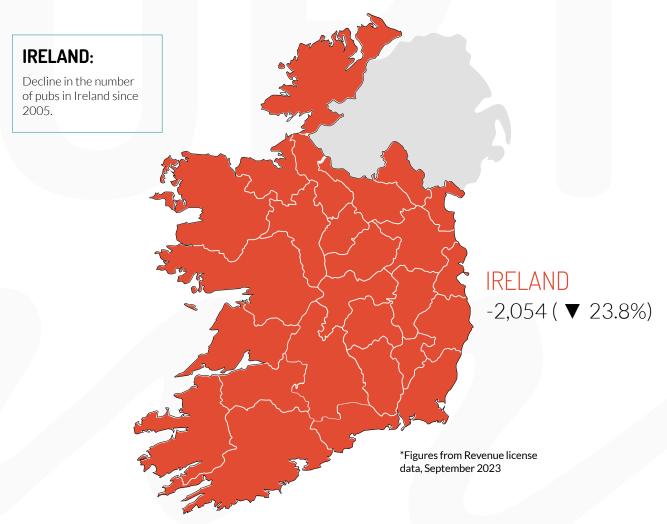

PERCENTAGE DECREASE IN NUMBER OF PUBLIC HOUSES

Percentage decrease in number of public houses between 2005 to 2023 by county, in order of magnitude of percentage decrease:

Rank in order of magnitude of % decline 2005-2023	County in order of % decrease in number of public houses 2005-2023	% decrease
1	Limerick	35.6
2	Roscommon	31.9
3	Cork	31.4
4	Tipperary	31.2
5/6	Laois	30.6
5/6	Clare	30.6
7	Westmeath	30
8	Мауо	28.9
9	Offaly	28
10	Leitrim	27.9
11	Longford	27.4
12	Donegal	26.9
13	Waterford	25.4
14	Sligo	25.1
15	Monaghan	24.8
16	Wexford	22.9
17	Louth	21.6
18	Kilkenny	21.7
19	Galway	21.6
20	Cavan	20.4
21	Kerry	18.5
22	Carlow	14.2
23	Kildare	12
24	Wicklow	8.9
25	Meath	6.7
26	Dublin	2.8
